

## Two-Screen 10-25" Desk Monitor TV Plasma LED LCD Work Mount

RRP: \$154.95

The Plasma/LED/LCD Two-Screen Desk Mount gives you nearly unlimited viewing options for not one but two flatscreen televisions or computer monitors, at home or at the office. It's easy to assemble and mount, and it's got the durability and smart features you deserve.

This sturdy mount is built to VESA standards of 100x100mm, meaning it will fit the majority of televisions and computer screens from 10 to 25 inches (25 to 64cm) with a maximum loading weight of 10kg (22lbs) for each screen.

Almost any way you want to view, this mount has you covered. And with plates for two screens, it's twice the viewing power! The mount attaches to the edge of most any desk with a simple screw plate. From there, two fully-articulated arms allow you to position the screens at heights of anywhere from 220 to 368mm. The arms swivel a full 360 degrees, and the mounting plates tilt both upwards and downwards up to 15 degrees each, which is great for customising your viewing experience and reducing unwanted glare.

All screws and bolts you need (that will fit the majority of screens) are also included along with full, easy-to-follow mounting instructions.

If you've got a desk, you've got nearly unlimited viewing options for two screens. Purchase your own Plasma/LED/LCD Two-Screen Desk Mount today.
