

400Kg Salvage Strong Recovery Magnet Neodymium Hook Treasure Hunting Fishing

RRP: \$209.95

Are you an avid treasure hunter that needs a strong magnet to find and pull your finds from the earth or water? If so, you need to take a look at this neodymium recovery magnet from Randy & Travis Machinery. With a 400-kilogramme pulling capacity, this powerful magnet is your key to salvaging useable metals, coins, or even lost jewellery in your search.

These relatively tiny—yet mighty—magnets can help you locate and retrieve metallic objects even in deep water. So, if you fancy a go at a pirate's lost treasure, one of these magnets can help you realise your dream.

They're powerful enough to latch onto metal items, even if they're covered in moss, mud, or barnacles. Explore the wonders the earth and ocean hold with your family—and create a memorable adventure.

The secret's in the combination of iron, nickel, and rare earth alloys of the element neodymium. That blend creates a powerful magnet that works even in the water—in fact, this blend is the strongest magnet material here on earth.

Magnet fishing for lost shipwrecks isn't all these magnets can do, though. Put them to work during the week to find wall studs since studs are nailed to the wall with metal nails.

Do, however, keep these powerful magnets away from magnetised objects such as healthcare devices, credit cards, cell phones, metering equipment, and other electronic devices.

Ready to fish for treasure instead of dinner? Buy this amazing neodymium magnet today!

Features and specifications:

- Material: NdFeB magnetic metal
- Pulling force: 400kg
- Colour: Silver
- Diameter: 100mm
- Plate thickness: 18mm
- Height: 70mm
