

40pcs Studio Acoustic Foam Sound Absorbtion Proofing Panels Tiles Wedge 30X30CM

RRP: \$269.95

If you have a home theatre or just love good music, acoustic foam is a must for improving the listening and playing experience. These acoustic foam tiles by Randy & Travis Machinery dampen echo and reduce reverberation, improving the sound quality in the room. Not only are they a must for making music and binge-watching your favourite movies, but they're also an effective way to block unwanted noise from outside your home. Use them in your office, in public theatres, or in cinemas – anywhere you need perfect sound.

These foam tiles are thicker and heavier than most of the acoustic foam tiles on the market today, with five centimetres of foam sitting between unwanted noise and you. Its high-density cell structure and fire-retardant properties make it your number one choice for your home or studio.

They're easy to install and maintain, too. Install them with your choice of screws, glue, nails, or staples, depending on your needs and skill level. Just take them out of their package for a couple of days first so that they can expand to their full size. Cleaning is a breeze – a quick once-over with your vacuum cleaner, and they're good to go. Don't wait to have great sound in your home or workplace. Order your acoustic tiles today!
