

20pcs Studio Acoustic Foam Corner Bass Trap Sound Absorption Treatment Proofing

RRP: \$109.95

If you're a musician or just like to spend your downtime in your home theatre, you know how vital the right acoustics are for a satisfying experience. Reduce excessive echo, reverberation, and sound reflection while fine-tuning the clarity of sounds with these corner bass trap acoustic tiles by Randy & Travis Machinery. Don't limit them to your music room or home theatre, though. They're perfect for blocking out annoying sounds from outside, especially if you live in a noisy city neighbourhood.

Made from high-density acoustic foam, these acoustic tiles are fire-retardant for safety and thicker than most of the other acoustic foam tiles on the market.

They're easy to install with your choice of staples, screws, nails, glue, or even double-sided tape. Since they come in a compressed package, simply take them out of the package and let them sit out for a day or two until they assume their correct size and shape. Neutral black in colour, they will blend in well with practically any décor or colour scheme. With these acoustic tiles, you'll never have to put up with unwanted noise or buzzy reverb in your home theatre. Order yours today!
