

Computer Desk Home Folding Adjustable Removable Laptop Notebook Working Table

RRP: \$159.95

When you work from home, whether an occasional take-home project or full time, you need a comfortable setup that encourages good posture. With this adjustable laptop worktable from Randy & Travis Machinery, you can adjust the tilt as well as the height, giving you custom comfort for optimum productivity. No more aching neck, wrists, back, and shoulders from a too-high or too-low keyboard. And with the anti-skid strip on this worktable's surface, your device will stay put, even if you need to tilt it a bit for ease of access. An adjustable mousepad table adds an extra dimension of custom comfort.

With wheels that rotate 360 degrees, it's easy to roll it into whatever room you want to work in. Even if your floors are carpeted in a short pile, these wheels roll along easily. Its adjustable height allows you to share it with everyone in your family. Use it for comfortable bedside reading, doing homework in the living room or kitchen, or working in your home office. In a pinch, it can even double as a tea table for serving snacks to family or guests. Its neutral white-and-black tones blend into the background in any colour scheme. It accommodates even large laptops up to 17 inches in length — and it's easy to assemble, even for first-time DIYers. Even better, when you're done working, it folds easily, so you can stow it away until the next time you need it. No home should be without at least one of these versatile desks. Get yours today!
