

Stainless Steel DIY Rope Balustrade Kit 3.2mm Swage 2 x Lag Screw Term - 10 pack

RRP: \$59.95

If you're planning to upgrade your residential or commercial property with a wire balustrade, these rugged, durable terminal lag screws by Randy & Travis Machinery work equally well with both vertical and horizontal runs of balustrade or landscaping wire. This 20-piece set works with 3.2-millimetre wire up to 10 metres in length.

To install, simply fasten one end of the run with one of the right-hand thread terminal lag screws, and then fasten the other end with one of the six-millimetre left-hand thread screws to the other wall or post. Swage them hydraulically with a mechanical press, or alternatively, with a hand swager. Just measure the length between the two inside posts. Then, cut the wire 47 millimetres shorter than that length.

Features and specifications:

- Material: Stainless steel
- Colour: Silver
- Quantity: 20 (10 right-hand thread and 10 left-hand thread screws)
- Dimensions: 40 x 6mm (L x D)
