

305mm Luminous Wall Clock Glow In The Dark Silent Quartz Indoor Home Modern Clock

Out of Stock: \$54.95

If you need a see-in-the dark clock, this whisper-quiet clock by Randy & Travis Machinery is the perfect solution. With its easy-to-read glowing numbers and hands, it's easy to see from anywhere in the room. Its high-precision movement ensures that it will give you the accurate time, day or night. It's perfect for your kitchen, home office, work office, living room, and even your bedroom. With no annoying ticking to keep them awake, it's the ideal solution for children who need a little light in their rooms to keep the "monsters" at bay. And, it will teach them how to read an analogue timepiece, a lost art in today's digital world.

Its neutral white face and black frame blend in beautifully with practically any room's décor, while its light green numbers provide a natural touch during the day and a comforting green glow at night.

During the day, the coating on the numbers and hands absorb the sunlight or room lighting. At night, the clock emits that stored light, making the hands and numbers glow. To increase the brightness, make sure to increase its exposure to light during the day. Four to eight hours is usually enough to absorb enough light to glow all night long. It makes a great wedding, birthday, housewarming, or holiday gift as well. Always know what time it is, day or night, without having to glance at your cell phone. Order your wall clock today!
