

Sound Deadener Roll Car Insulation Mat 30% Thicker Noise Proofing Heat Shield

RRP: \$244.95

Do you feel uneasy while driving because of too loud noise? Then it is high time you install this Sound Deadener Butyl Insulation Mat from Randy & Travis Machinery!

This insulation mat is carefully designed with butyl rubber, aluminium foil and waxed paper to significantly reduce the noise due to vibrations coming through the car panels. Your passengers will now be able to sleep in the back seat.

All you need is a blade or heavy-duty scissors to cut your sound deadening material into the right shape. Line it up and measure it perfectly to the edge of the door. Just peel the wax paper backing off and press your sound deadening insulation directly onto your car frame. It will stick without any extra products needed. Make sure the temperature of the surface is between -15°C to 60°C . Clean off the panelling and make sure it is dry. Measure and cut the sheets then press down firmly and you're done!

Form a tight seal on the panels of your car. Just make sure to follow the instructions for the correct insulation as replacing it can be a pain.

Features & Specifications:

- Ideal for vibration reduction
- Strong self-adhesive
- Face material: Aluminium foil
- Middle Material: Butyl Rubber
- Base film material: Waxed paper
- Colour: Silver, black
- Recommend install temperature: -15°C to 60°C
- Temperature resistant range: -30°C to 120°C
- Each mat measures approximately 50x40cm; 20 mats per order
