

Rear Motorcycle Stand Heavy-Duty Motorbike Lift Paddock Carrier Bike Fork

RRP: \$199.95

The Randy & Travis Machinery rear motorcycle stand lifts the rear wheel of the bike off the ground, as well as provides a base to which the bike can be padlocked for added security. If you need to complete emergency repairs, the stand will hold your bike securely in position during the procedure. A more stable alternative to a kickstand, the broad base of the motorbike lift means it can be used on softer, paddock surfaces as well as on a hardstanding.

This stand has a weight limit of 200kg - large enough to accommodate most bikes. The stand arms can also be adjusted to suit bikes of different sizes.

Robustly constructed and weatherproof, the stand weighs just 5.5kg, making it easy to transport when not in use.

Features:

- Made from a continuous section of steel tubing for added strength
- Durable nylon wheels for easy movement
- Weather/water resistant due to powder coating
- Adjustable arms to fit most bikes
- Rubber base cushions protect the frame and improve stability

Specifications:

- Material: powder-coated 3.2cm (32mm) steel tubing/nylon wheels
- Weight limit: 200kg
- Weight of package: 5.5kg
