

Rechargeable Table Desk Lamp LED Touch Dimmable Bedroom Night Light Cordless

RRP: \$144.95

LED lighting is becoming increasingly popular as an energy-efficient way to illuminate your home. Not only are LEDs better for your energy bills, but they last far longer than traditional incandescent lighting. More and more people are making the switch and refitting their fixtures with LED bulbs. At Randy & Travis Machinery, we have taken the best of modern lighting technology and paired it with a timeless, elegant design for your bedside table.

Our minimalist lamp suits both modern and Art Deco interiors and you can easily adjust the brightness to suit your needs. If you like to read before bed, you can use it at maximum brightness and then use the dimmer when you are ready to drift off. Warm white light is particularly useful if you normally struggle with getting to sleep as it helps your body to relax and follows your body's natural circadian rhythm.

The lamp is incredibly easy to use thanks to its built-in touch sensor. By using a long press on the sensor, you can adjust the brightness. The lamp is made with aluminium and acrylic and has a polished chrome effect finish. This adds a touch of luxury to your bedroom decor while providing a practical and dependable source of light. The lamp can be charged with a USB cable and we provide a discreet black cord for charging, allowing its beautiful design to remain front and centre.

Specifications:

- Height: 28cm
- Base diameter: 9cm
- Lamp diameter: 13cm
