

Solar LED Spotlight - Solar-powered motion-activated LED security light

RRP: \$54.95

The Randy & Travis solar spotlight combines both form and function with its sleek LED design and security-enhancing properties. The spotlight is designed to emulate a CCTV camera with its circular LED lens and blinking red light that imitates live-feed technology. Such a design means that, even when the spotlight isn't in operation, the easy-to-mount structure serves as a deterrent against criminal activity on-and-around your property. That way, you can guarantee the personal safety of you and your home.

Capitalising on the Aussie weather, the spotlight is completely solar powered – owing to the state-of-the-art solar panels attached to the motion sensor. This means you can save wiring installations or continual battery purchases. Simply mount the spotlight to your garage door, house surface, or other convenient location where it can soak up the sun's rays and offer prime motion-sensing capabilities. What's more, the solar panels are attached by a swivel joint so that you can manipulate them into a position that allows them to capture most sun rays. The Handy Brite Spotlight responds instantly and automatically to detected motion before switching off when the motion stops to preserve its energy. The spotlight houses eight ultra-bright LED lights that can brighten a considerable distance, allowing you to view anyone who approaches your property with ease.

Are you looking to improve the security of your home, garage, driveway or garden? Randy & Travis Machinery Solar LED Spotlight is designed to increase your residential security while saving on expensive installation costs and energy bills associated with modern CCTV structures.

Features and specifications:

- Solar-powered technology
