

Vented Garage Floor Tiles | Snow Water Drainage | 30x30cm

RRP: \$504.95

Introducing our Garage Floor Tiles, vented, and sized at 30x30cm. Engineered by Randy & Travis Machinery, these tiles are known for their exceptional durability and ease of installation.

Made from impact-resistant polypropylene, these hard plastic tiles are designed to resist staining from oil, gas, and household chemicals. Their sturdy construction allows them to withstand heavy rolling vehicle loads, making them ideal for garage floors.

Featuring a popular Diamond pattern, these tiles can instantly transform any garage into a stylish space. Each tile weighs just 0.28kg, providing a lightweight yet robust flooring solution.

These versatile tiles have a wide range of applications, making them suitable for both residential and commercial use. They are commonly used in garages, trade show booths, dealership showrooms, storage sheds, workshops, and even as car show display flooring.

Maintenance is hassle-free, requiring occasional vacuuming or sweeping to remove loose debris. For tougher dirt or stains, a simple hose off or damp mop with mild soap and water will suffice.

Installation is a breeze. Start from the front left corner, ensuring the female side (loops) of the tile faces away from the wall. Fill the room with whole tiles, and when encountering walls or objects, measure and cut the tiles accordingly, leaving a 19mm space. Edge pieces can be snapped in if desired.

Specification of each tile:

- Thickness: 1.2cm
- Size: 30x30cm
- Weight: 0.28kg
- Quantity: 50 tiles

Recommended Uses:

- Garages
- Trade show booths
